

MEET YOUR TUTOR

Shaina Fils-Aimé

Academic & Executive-Function Coach • Program Leader

A Coach Who Builds Both Skills and Confidence

With five years of experience helping students build academic skills and the confidence to use them, Shaina Fils-Aimé brings a rare combination of personalized coaching expertise and program-leadership skill to her work with students and families.

From Instructor to Statewide Education Leader

Shaina spent five years with Axiom Learning, starting as an instructor delivering personalized academic and executive-function coaching to students ranging from age five through college. She integrated Axiom's proprietary LEAP curriculum into lessons tailored to each student and guided students through SAT and standardized-test preparation — helping them achieve an average 200-point score increase. Her success as an instructor led to steady promotions: to Assistant Regional Manager, supervising instructional quality and coaching across Massachusetts centers; to Center Director of Axiom's flagship Wellesley location, where she managed a team of instructors and mentored new center directors; and finally to Senior Education Supervisor, where she directed statewide educator development and designed professional-learning modules on executive functioning and instructional best practices.

A Steady Hand for Families

Throughout her time at Axiom, Shaina served as the point of contact for families with academic concerns, working to keep parents informed and reassured about their child's progress. She also created the progress-tracking templates and standardized documentation that brought more transparency and data-driven decision-making to the coaching process — the kind of organized, communicative approach families notice and appreciate.

Continued Leadership in Community Programs

Shaina currently serves as a Program, Events, and Volunteer Manager, where she manages and trains volunteers, leads youth development programming focused on leadership and life skills, and coordinates community events and partnerships. She also revived a community newsletter and oversees program budgets — work that continues to draw on the same organizational skill and community-building instinct she developed at Axiom.

Education

Shaina attended Boston University, completing 104 credits toward a degree in Computer Engineering, after graduating from Boston Latin School.
